

Setup Google Mail Security to work with Email clients

This guide will show how to setup google mail security to work with Email clients such as MS Outlook

1. Go to your [Google Account](#) – if a login is required, login.
2. On the left navigation panel, click Security

3. On the bottom of the page that will appear, in the *Less secure app access panel*, click Turn on access.
If you don't see this setting, your administrator might have turned off less secure app account access.

← Less secure app access

Some apps and devices use less secure sign-in technology, which makes your account vulnerable. You can turn off access for these apps, which we recommend, or turn it on if you want to use them despite the risks. Google will automatically turn this setting OFF if it's not being used. [Learn more](#)

Allow less secure apps: ON

4. Once the settings are set, close the google settings window and configure the Email client as per normal in order to get access to Google email.
